

RTAM FOUNDATION — USAGE RULES

Quick reference. For the full rationale see `brand-book.md`.

1 · PICKING A WORDMARK

CONTEXT	FILE
Default. Anywhere the bindu reproduces.	<code>rtam-wordmark-sacred-RTAM-dot.svg</code>
Sacred surface, embossed, foil, single-color gold print.	<code>rtam-wordmark-gold.svg</code>
Pure-black reproduction (fax, microform, single-color).	<code>rtam-wordmark-black.svg</code>
Charcoal ground (ivory wordmark on baked charcoal rect). For indigo / photographic overlays, remove the first <code><rect></code> in the SVG.	<code>rtam-wordmark-white.svg</code>
Bindu cannot reproduce (small sign vinyl, embroidery < 6 cm).	<code>rtam-wordmark-public-RTAM.svg</code>

2 · PICKING AN ICON

CONTEXT	FILE
Square app icon, social avatar, charcoal R.	<code>rtam-rdot-icon-gold.svg</code>
Dark theme, ivory R + gold bindu.	(use <code>-gold</code> on charcoal ground)
App icon needing visual frame.	<code>rtam-rdot-icon-circle-gold.svg</code>
Pure-black version of the framed icon.	<code>rtam-rdot-icon-circle-charcoal.svg</code>
Browser tab (≤ 64 px).	<code>favicon.svg</code>
Anywhere above 64 px — favicon's bindu detaches at scale.	full R-monogram, not the favicon
Devanagari-first contexts.	<code>rtam-devanagari-ri-icon-*.svg</code>

3 · PICKING A LOCKUP

CONTEXT	FILE
Default bilingual (website footer, certificate, letterhead).	<code>rtam-bilingual-foundation.svg</code>
Scholarly / sacred / trust deed.	<code>rtam-sanskritic-pratishthan.svg</code>
Temple signage, donor materials.	<code>rtambhareshvara-mandir-lockup.svg</code>
Donation receipts, fundraising pages, contribution forms.	<code>donation-lockup.svg</code>

4 · COLOR RULES

- Default ground: **ivory** (#F7F3E9).
- Sacred ground: **indigo** (#1C1A3D).
- Body text: **charcoal** (#1A1A1A).
- Bindu and rules: **gold** (#C8A15A).
- Quiet supporting copy: **stone gray** (#B8B1A4).
- The wordmark MUST work in pure #1A1A1A — this is the reproduction floor.

5 · TYPE RULES

- Display Latin: **Cinzel** 400–700.
- Devanagari: **Tiro Devanagari Sanskrit** (regular).
- Body / UI: **Inter** 300–600.
- Pair Cinzel with Tiro Devanagari Sanskrit. Never pair either with a third display face.
- For headlines: Cinzel 500 with letter-spacing 0.04–0.10 em depending on size.
- For all-caps labels (kickers, metadata): Inter 300, letter-spacing 0.20–0.40 em.

6 · CLEAR-SPACE

- **Wordmark:** clear-space = cap-height of R on every side (≈ 120 viewBox units in the 1080×240 canonical).
- **R-monogram, ठ-monogram:** clear-space = $\frac{1}{4}$ of icon width.
- **Temple lockup:** preserve the full 1280×380 viewBox — no cropping, no letter-spacing reduction.

7 · THE BINDU

The bindu is **drawn**, not typed. It is a `<circle>` in the SVG with explicit `cx`, `cy`, and `r`. Do not:

- replace it with the Unicode combining dot below (U+0323),
- shift it independently of the R,
- recolor it independently of the wordmark variant,
- shrink it below `r=10` in the 1080-wide wordmark (it becomes invisible).

Need a different placement? Use the existing variant file or request a new variant. Don't edit in place.

8 · THE SEAL

- Always smaller than the primary mark on the same surface.
- Opacity 0.10–0.20 when used as a watermark (e.g. certificate ground).
- Opacity 0.55–0.70 for the tiled pattern field (envelope interiors, brand-book endpapers).
- Never substitute for the wordmark.
- Never add petals, spokes, flame, or text inside the ring.

9 · WHAT NEVER TO DO

- Render the wordmark on a busy photo background.
- Outline, emboss, drop-shadow, or gradient the wordmark.
- Recolor the bindu without recoloring the wordmark to match a variant.
- Use the `public-RTAM` (no-bindu) variant when the bindu would reproduce.
- Use the favicon SVG above 64 px.
- Pair the brand with a competing serif display face.
- Add a tagline directly under the wordmark inside its clear-space.
